

Series 6000

CD OZONE GENERATOR WITH AN
INBUILT COMPRESSOR

Need a reliable ozone generator?

ozoneindustries

Series 6000 is the solution!

Ozone Industries® series 6000 ozone generators is primarily used to control odours, mould and bacteria in the air and on work surfaces.

The ozone generators are mainly 1 and 2 cell stand alone units using compressed ambient air, but can be much larger and can be complemented by oxygen concentrators for greatly increased power.

All series 6000 products use the **corona discharge** technology to produce ozone.

What is Corona Discharge?

Corona Discharge, or CD is an imitation of a natural process, lightning.

High voltage is applied to a "cell" which produces a corona effect, breaking down oxygen and recombining it into ozone.

In this way large amounts of ozone can be produced from a relatively small unit.

Housed in a commercial, powder coated metal cabinets, these ozone generators are designed for use in environments where the unit is to remain outside the area to be treated.

Possibilities!

- Control bacteria on work surfaces in food and beverage processing plants.
- Slow down the after harvest ripening and decay process of stored fruit and vegetables.
- Slow the decay of fruit, vegetables, meat, fish and poultry in transit.
- Control the growth of mould in cellars and wineries.
- Remove smoke odour from buildings and furniture after a fire.
- Reduce odour emissions from fast food outlets, restaurants and food processing plants.
- small water treatment *without using a venturi*.

Ozone Industries is a brand of **IBC Water**

Since 1888, IBC Water has a proud tradition in the supply of filtration and water conditioning products for commercial, industrial and residential application.
