

ozoneindustries

**There is nothing nicer than living in a healthy fresh smelling environment.
Create a pleasant atmosphere in your nursing home.**

**Protect the health of your residents.
Sanitise and deodorise without using
chemicals.**

Ozone Industries Series 3000 UV ozone generators will quickly and efficiently destroy bacteria, virus and odours (particularly incontinence and bathroom odours).

Recently a Director of Nursing commented, *"I wasn't convinced it would really work, but when we tried the ozone generator in one of our clients' rooms we were really surprised that the odour was quickly and completely destroyed. This device is absolutely essential for sanitising nursing home environments."*

What is OZONE?

The Ozone Industries Series 3000 UV generators produce natural Ozone. Ozone is a very powerful oxidant and an ideal chemical-free disinfecting agent.

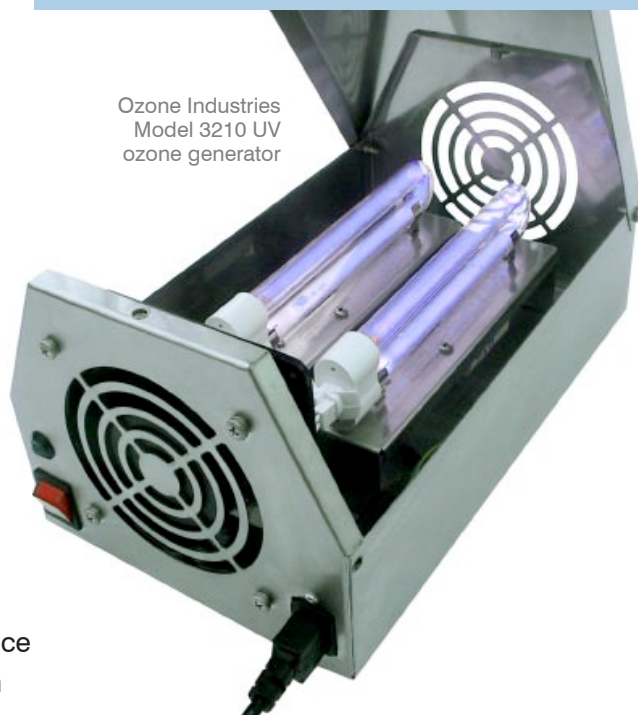

Ozone is far more effective in destroying odours than chemicals because it actually kills the bacteria and destroys the chemical compounds responsible for the smell instead of just masking one smell with another.

Ozone is a naturally occurring gas created from oxygen atoms. The oxygen molecules are broken into atoms by UV light at a particular frequency. They then recombine into loosely bonded tri-atomic oxygen known as 'ozone'. Ozone has been known about for most of the 20th century with the technology of recent years finally allowing it to be generated efficiently.

Ozone Industries is a brand of **IBC Water**

Since 1888, IBC Water has a proud tradition in the supply of filtration and water conditioning products for commercial, industrial and residential application.

**Ozone is nature's own
chemical-free disinfectant.**
